

WordPress Website Transfers

MAKE WORDPRESS WORK BETTER

WHY TRANSFER YOUR WORDPRESS WEBSITE TO OUR MANAGED HOSTING?

"We were so pleased with the overall experience that we have also chosen Boom Solutions to host our site and continue supporting us."

Sara – Essential Therapie

Our portfolio

We know what it takes to keep a WordPress website running at optimum. We will look after your website and support you so you can focus on running your business.

1) Everything is taken care of for you

Upgrades, security, migrations, you name it – we'll handle it. In the long run, this absolutely winds up saving you time, money, IT resources, and so much more.

2) Your site gets its own dedicated resources

We put your site on a dedicated VPS, whereas shared hosting is just that: a shared server, tied to loads of other sites that could be dealing with malware, performance issues, and more.

3) Managed hosting is really fast

We tune our servers WordPress performance and configure all the caching, so you don't have to set up caching plugins or worry about your site speed.

4) Top-notch security

We'll keep your sites safe and secure.

5) We've got your back

We put your site on a dedicated VPS, whereas shared hosting is just that: a shared server, tied to a bunch of other sites that could be dealing with malware, performance issues, and more.

6) It's easy for you to stay involved!

We will send you a monthly report showing you exactly what has been done to keep your site happy & running well. What to do in user stats? No problem, we'll add Google Analytics so you can see everything in one place.

- **WordPress development:** Configuring plugins or building bespoke functionality to enrich your website

How it works

WEBSITE TRANSFER PROCESS

Transferring your existing WordPress site to us is safe and hassle free.

1. AUDIT

We perform our initial audits and reviews of your existing WordPress site, looking at your security, code base, load speed, SEO, usability and design.

2. FIX

We implement any security fixes that need to be in place before we can transfer your website to us, and fix any high priority existing bugs causing you grief.

3. TRANSFER

We move your website to our server and test that everything's working – particularly any interactive customer features such as forms and payments.

4. IMPROVE

We perform our initial audits and reviews of your existing WordPress site, looking at your security, code base, load speed, SEO, usability and design.

5. REVIEW

We hold regular reviews to understand the impact of any changes based on your Analytics, and suggest more ideas to improve performance further.
